EDUCATION

University of California, San Diego

San Diego, CA

B.S. in Data Science

September 2024 – June 2028

Relevant Coursework: Intro to Data Science, Principles of Data Science, Programing and Data Structures for Data Science, Data Structures and Algorithms, Calculus III, Linear Algebra

EXPERIENCE

Hermes AI

San Diego, CA

Founder

Dec. 2025 – Present

- Engineered a high-throughput matching engine processing **500,000+** **vector-based matches** and handling **2M impressions** and **5.5k users** within the first 14 days of launch.
- Architected a scalable backend with **FastAPI** and **Redis**, implementing multi-layer caching to maintain sub-second retrieval latency during rapid user influx.
- Architected a multi-source ETL pipeline using **Puppeteer** and **BeautifulSoup** to scrape and enrich founder/company entities with contact data, utilizing **vector embeddings** in **Pinecone** for high-dimensional user-to-company matching for 1000+ companies
- Iterated on agentic RAG workflows using **LangChain** and **Gemini API**, pivoting matching logic based on **50+ customer interviews** to optimize candidate to hire placement

Lockd

San Diego, CA

Chief Executive Officer

Aug. 2025 – Present

- Developed an MVP using **React Native** and **Supabase** in 4 days, acquiring **100+ waitlist users** through automated engagement workflows.
- Analyzed **500K+** **impressions** and landing page traffic using **Google Analytics**, identifying key conversion drivers that led to a **15% increase** in sign-ups.
- Executed A/B testing and beta trials with 30+ users, achieving a **90% retention rate** over 14 days by quantifying user behavior to guide rapid feature iteration.

KEY PROJECTS

ShowRunner AI — *Python, Pandas, NumPy, Scikit-learn, Matplotlib*

- Applied **inferential statistics** (Bootstrapping, Hypothesis Testing, Linear Regression) to analyze Friends TV data, modeling director performance and predicting optimal reboot success metrics.
- Engineered data visualizations for character sentiment analysis and IMDB viewership trends across 236 episodes.

LyricLens — *Python, TF-IDF, Scikit-learn, Spotipy, Jupyter Notebook*

- Developed a song recommendation engine using **Euclidean distance** for audio feature similarity and **TF-IDF** for semantic keyword extraction from Taylor Swift's discography.

ImageIQ — *Python, NumPy, PIL, Tkinter*

- Built an image processing GUI featuring a **K-Nearest Neighbor (KNN)** classifier for intelligent image labeling and NumPy-optimized algorithms for real-time grayscale/negative transformations.

SKILLS & CERTIFICATIONS

Languages: Python (NumPy, Pandas, Scikit-Learn, **PyTorch**), SQL (PostgreSQL, **pgvector**), JavaScript/TypeScript, Java

AI & Data Engineering: RAG (**LangChain**, **LlamaIndex**), Vector DBs (**Pinecone**), LLM APIs (Gemini, GPT-4), ETL (Puppeteer, BeautifulSoup), Redis, TensorFlow, **XGBoost**

Web & Infrastructure: **Docker**, **FastAPI (Pydantic)**, Node.js, React, Tailwind CSS, Next.js, React Native, Supabase, AWS (Lambda, S3), Git

Certifications: **Machine Learning Specialization** (Stanford Online/DeepLearning.AI)
